

HEALTH EDUCATION

The Board is committed to a sound, comprehensive health education program as an integral part of each student's general education. The health education program will meet or exceed the requirements established by law.

The Board believes that an effective health education lies with the public schools because of the opportunity to reach students at an age when positive, lifelong health habits may be instilled.

The health education program will emphasize a wellness-oriented approach to the presentation of health information, skills and knowledge necessary for students to develop and lead a healthy lifestyle.

The Board, in an effort to promote a relevant approach to the instruction of health education, will continue to ensure a quality health education program.
